Personal Profile

Creative Technologist working across the full stack to build AI-native tools and immersive experiences for a scientific-communications design studio. I've shipped an internal AI video-generation platform end-to-end: Cloudflare Workers, a React frontend, and integrations with the Anthropic API and third-party video models; alongside leading the technical build on XR and web-based AR experiences for consumer healthcare brands. I like working closely with designers and strategists to influence creative direction with my technical judgement, and I pick up new parts of a stack quickly: my JavaScript/TypeScript and Three.js foundation carried straight across into Cloudflare Workers, D1, and React on my most recent build.

Key Skills

Programming: JavaScript, TypeScript, HTML/CSS, Node.js, Three.js

Frameworks & Data: React, Express, Hono, Cloudflare Workers, D1 (SQLite), Supabase (Postgres), R2

AI & APIs: Anthropic API (Claude), agentic development with Claude Code, third-party model integration (PiAPI, video-generation APIs)

Design: User Interface, Web Design, Prototyping, App Design

Software: Blender, Unreal Engine, Adobe Suite

Soft Skills: Communication, collaboration, problem-solving

Personal Projects

Free the Motive — free London music-events aggregator (in progress)

- Building a full-stack web app end-to-end: Node/Express backend, Supabase (Postgres) database, vanilla JS frontend, deployed via Vercel and Railway
- Designed and wrote data-ingestion scripts against official and undocumented APIs, including schema mapping and duplicate-checking logic
- Self-directed learning vehicle for full-stack fundamentals outside of studio work: scraping, API integration, and data pipelines

Relevant Work Experience

D5XR and D5 Design | Creative Technologist *Nov 2023 – Current*

- Designed and built an internal full-stack AI video-generation tool from scratch, using Cloudflare Workers (Hono) for the backend, D1 and R2 for data and file storage, and a Vite + React frontend, working alongside Claude Code as a pair-programming partner
- Integrated the Anthropic API for prompt drafting and PiAPI for video rendering; reduced 420p–720p render costs to approximately $0.50–$0.75 per video versus $1–$1.20 through tools such as Runway and Higgsfield, while keeping NDA-covered client references in a shorter-lived internal workflow and saving renders directly to the studio cloud.
- Led technical architecture for a range of XR experiences to explain breakthrough discoveries and innovations, bringing complex concepts to life for leading consumer healthcare brands
- Collaborated closely with graphic designers and 3D animators in a fast-paced environment on projects ranging from virtual product tours and AR visualisations to an interactive skincare course

University of the Arts London | Creative Coding Technician *Feb 2023 – Apr 2023*

- Responsible for assisting students with creative coding and running workshops on immersive technology
- Guided students on interactive projects involving sensors, cameras, Arduino and Virtual Reality

AIxDesign | AI Tooling Lead *Mar 2022 – Feb 2023*

- Prototyped creative AI experiments using pre-made tools and coding custom models
- Engaged in independent critical research, translating technical knowledge to wider audiences
- Designed assets for social media, driving engagement with videos and infographics

The Open University | User Interface Designer *Aug 2021 – May 2022*

- Iterated designs to optimise user interaction, accounting for multiple stakeholders
- Engaged in user research to test prototypes and evaluate feedback

- Communicated wireframes effectively to developers and presented to advisory boards

Independent | Creative Technologist (Self-employed) *Jul 2021 – Jan 2026*
- Managed a solo business end-to-end, from acquiring clients to invoicing
- Led projects for multiple clients, including 3D animations and interactive web experiences

Education

BSc (Hons) Digital Arts Computing, First Class | Goldsmiths, University of London
Sep 2018 – Jun 2021 | Computer science degree combined with fine art
- Fundamental programming skills in JavaScript and C++, focused on audio-visual technology
- Designed and produced creative projects and interactive exhibitions
- Relevant modules: Principles & Applications of Programming; Data & Machine Learning for Creative Practice

Further Work Experience

Mighty Morphing Diffusion Workshop, CSM | Workshop Facilitator *Apr 2024*
- Taught MA Graphic Design students a generative AI workflow augmenting personal media into new creations

Creative Machines Symposium | Panel Chair, 'Curating AI & VR Art' *Sep 2022*
- Chaired panel on the potential of new media art, liaising with speakers from the V&A and Gazelli Art House

In-grid Collective | Residency & Creative Technologist Member *Feb 2020 – Sep 2023*
- Created UI wireframes and developed a chatbot for the collective's website
- Developed an Augmented Reality installation with 3D animations
- Organised and promoted computational art exhibitions at venues including Corsica Studios and IKLECTIK

Extracurricular & Volunteer Experience

Wanderers of Colour | Climbing Wall Instructor (Trainee) *Assessment Oct 2026*
- Training to become a qualified Climbing Wall Instructor (CWI), with assessment scheduled for early October 2026
- Facilitated regular climbing sessions with Wanderers of Colour, an outdoors inclusion group

Independent | DJ *Sep 2022 – Current*
- Actively DJed at diverse music events, collaborating with visual artists to create immersive audio-visual experiences
- Organised an event celebrating Indonesian culture, with over 200 attendees

Languages

Basic Mandarin and Indonesian
